

Software Quality Assurance Test Plan

Project: E-Commerce Platform Testing (Shopping Cart & Checkout)

Prepared By: QA Engineer Specialist

1. Introduction & Objectives

This Test Plan outlines the testing strategy, scope, and resources required to validate the core functionalities of the E-Commerce platform, specifically focusing on user authentication, product catalog interaction, shopping cart management, and the checkout funnel.

2. Scope of Testing

In Scope:

- User registration, login, and guest checkout flows.
- Product filtering, searching, and product detail verification.
- Adding, updating, and deleting items in the shopping cart.
- Payment gateway processing simulations (successful and failed transitions).

Out of Scope:

- Back-end inventory management systems.
- Security penetration testing and load/stress performance analysis.

3. Target Test Environments

Testing will be carried out across major responsive viewports and web browser variations:

- **Desktop Browsers:** Google Chrome (Latest), Mozilla Firefox, Microsoft Edge, Safari.
- **Mobile Browsers:** Safari on iOS, Chrome on Android.

4. Defect Management & Entry Criteria

Entry Criteria: The test environment must be fully deployed, stable, and populated with representative test catalog data.

Defect Lifecycle: All discovered bugs must be logged instantly in the issue tracking system with reproduction steps, environment details, expected behavior, and video or screenshot attachments.

5. Exit & Pass/Fail Criteria

- 100% of planned critical path test cases executed.
- At least 95% overall test case pass rate achieved.
- Zero Blockers, Critical, or High severity bugs remaining open in production-ready builds.
